# SS&C | blueprism

# Blue Prism® Associate Developer

## Course Data Sheet

This 2-day instructor led training (ILT) course builds upon the essential skills and knowledge learned during the Blue Prism Foundation training. During the course, you will get hands-on experience applying process and object design best practices to a solution, using the Process Templates, Credentials Manager, Advanced Data Items and Advanced Attribute Matching techniques to improve your automation design. The course concludes with an overview of the Reconsolidation exercise.

**Objectives**
At the end of this course, you will be able to:

- Explain the purpose and benefits of using the Blue Prism templates when creating an automation
- Identify best practices for designing Processes and Objects
- Explain the importance of using Blue Prism Credentials Manager
- Configure and apply credentials to a process
- Demonstrate using Advanced Data Item features
- Explain the purpose and benefits of Match Type Attributes
- Configure and use Dynamic Match Types to improve the efficiency and reusability of your Business Object
